

AMENDMENTS TO THE CLAIMS

Listing of claims:

This listing of claims replaces all prior versions and listings of claims in the application.

1. (Amended) A mobile apparatus comprising:

a broadcast receiving function for receiving a television broadcast; and

a telephone communication function for performing a telephone communication, wherein

an audio output device comprising a left-channel audio output unit[s] and a right-channel audio output unit ~~of two systems, the audio output device outputting a television audio and a telephone-received audio, and~~

an audio processing circuit for outputting a left-channel signal of a the television audio to the left-channel audio output unit and outputting a right-channel signal of the television audio to the right-channel audio output unit when a telephone communication is not performed and the television is viewed and listened to, the audio processing circuit further generating a monaural television audio signal from the left-channel signal and the right-channle signal of the television audio, outputting a monaural television audio using one of the left-channel and right-channel audio output units of the two systems and outputting the a telephone-received audio using the other audio output unit when a in the case of performing the telephone communication is performed while the television is continuously viewed / listened at the time of viewing / listening to the television, are provided.

2. (Amended) A mobile apparatus as claimed in Claim 1, wherein

a setting means for setting which of the audio output units ~~of the two systems~~ is used for outputting the television audio and the telephone-received audio in the case of performing the telephone communication ~~while continuously~~ at the time of viewing / listening to the television, is provided.

3. (Amended) A mobile apparatus as claimed in any one of Claims 1 and 2, wherein a sound volume ratio control means for controlling a ratio of sound volumes of the two audio output units ~~of the two systems~~ in the case of performing the telephone communication ~~while continuously~~ at the time of viewing / listening to the television, is provided.

4. (Original) A mobile apparatus as claimed in Claim 3, wherein a setting means used by a user for setting the sound volume ratio is provided.

5. (Original) A mobile apparatus as claimed in any one of Claims 3 and 4, wherein the sound volume ratio control means controls the sound volume ratio so that the sound volume of the telephone-received audio is higher than the sound volume of the television audio.

6. (Amended) A mobile apparatus as claimed in any one of Claims 1 to 5, wherein a display device for displaying a television image and a telephone-received image and a display control means for displaying both of the television image and the telephone-received image on the display device in the case of performing the telephone communication ~~while continuously~~ at the time of viewing / listening to the television, are provided.

7. (Original) A mobile apparatus as claimed in Claim 6, wherein the display control means window-displays one of the television image and the telephone-received image in a displayed image of the other.

8. (Original) A mobile apparatus as claimed in Claim 6, wherein the display control means divides a display screen into two regions and displays the television image in one of the divided display regions and the telephone-received image in the other region.
